ABOUT ME

Graduated from the University of Information Technology (UIT) and am passionate about understanding application architecture and operation. I have nearly 3 years of work experience at Patsoft, including my time as an intern.

During my time there, I participated in developing mobile and web applications for many large clients, which helped me hone my programming, interface design, and project management skills. As a fast learner with good adaptability and a strong commitment to completing tasks, I am eager to join a professional working environment to continue developing myself and contributing to the company. In addition to my technical skills, I also have good communication skills, work effectively in a team, and always maintain a positive attitude at work.

WORK EXPERIENCE

Logisoft

6/2021 - 12/2021

- Url: <https://demo.logisoft.app/#/login>
- Develop FE logistics management system for goods distribution businesses

Hanbiro (Internship)

3/2023 - 5/2023

- I participated in the company's VORA project, which is a project to manage employees.

Patsoft (Fullstack Developer)

8/2023 - NOW

- In this role, my primary position was as a Full-Stack Developer.
- However, instead of specializing deeply in any single area, I focused on a project-based approach, covering everything from mobile and backend development to frontend website creation, and even interacting with hardware devices such as RFID reader routers, handheld RFID scanners, and QR code scanners.

EDUCATION

9/2019 -> 9/2023

UNIVERSITY OF INFORMATION
TECHNOLOGY

GPA: 7/10

JLPT: N3

Toiec: 550

PROJECTS

Porfolio

26/05/2024 - NOW

- Url: <https://nmt-porfolio.netlify.app/>
- Project Overview:
 - The portfolio is where I want to showcase the projects I'm most proud of from my entire career up to this point.
 - It includes features like CRUD (Create, Read, Update, Delete) functionality for projects. However, I can only add projects when logged in with my own account; otherwise, users can only view them
- Technologies used: Next.js, MongoDB

Hai Nam ERP mobile

01/09/2024 - 30/11/2024

- Url: <https://nmt-porfolio.netlify.app/>
- Project Overview:
 - This is an Android mobile application used for scanning QR codes to manage warehouse operations such as inventory, stock in/out, and product information entry for printing labels.
- Technologies used: React Native, Dotnet core, Docker, Sql Server

Nail Store Manager

05/08/2024 - 20/10/2024

- Url: <https://nmt-porfolio.netlify.app/Pages/work>
- Project Overview:
 - This project is a management system for a nail salon in the US. It's designed to record customer services, the employees who performed them, and the corresponding costs. This helps the salon owner easily monitor the business's revenue.
- Technologies used: WPF

Logging manager system

01/02/2024 - 30/02/2024

- Url: <https://nmt-log-manageer.netlify.app/>
- Project Overview:
 - This is a full-stack project for managing logs on mobile products.
 - Project Structure and Logic
 - Frontend: The frontend simply serves as a dashboard for me to view detailed log information.
 - Backend: The backend organizes the APIs. When coding, I call these APIs to store the necessary information in MongoDB.
- Technologies used: React.js (Vite), Tailwind css, NestJS, KeyDB, MongoDB, Docker
